

## Fats Oils and Grease

The old saying “ Out of sight is out of mind “ may be good for many things but not so with GREASE.

Once out of sight your problems are just starting.

Cooking grease is one of the major causes of residential sewer clogs. These clogs can end up causing sewer spills. Cooking grease coats pipelines much the same as fatty foods clog human arteries. The grease clings to the insides of the pipe, eventually causing blockage and potential sewer spills.

A few simple kitchen procedures now will prevent costly problems in the future.

Instead of putting meat trimmings down the garbage disposal place them in the trashcan.

Wipe greasy residue from frying pans and cooking pots with a paper towel prior to washing. Place the towel in the trash.

Cooking oil and grease should be collected in a non-recyclable container and disposed of in the trash. These fats and oils include salad oil, bacon fat, sausage and ham fat, and frying oil.

Help us keep Concord's arteries clean. Dispose of your grease in the proper manner.
